

# Extend your reach with the most extensive private network in Canada

## Secure and cost-effective IP VPN access options

IP VPN service from Bell is a wide area network (WAN) solution delivered over a single and secure leading North American MPLS network. It allows you to easily and affordably connect your customers to their clients to share voice, data and video across Canada, the U.S. and/or around the world.

With our IP VPN service, you receive the quality, reliability, security and scalability of the most extensive private IP-based network in Canada.

Bell now offers three new access options to help your customers quickly and cost-effectively connect to our IP VPN/MPLS network. The access options include a wireline option – Value IP Sec (DSL) and two wireless options - Value HSPA and Enhanced HSPA.

### Wireline access

Our Value IP VPN IP Sec (DSL) is a cost-effective solution that ensures data confidentiality via encrypted IP Sec tunnels through the Internet for secure access to our IP VPN/MPLS private network. This affordable, fully-managed and secure solution is ideal for organizations leveraging Point of Sale (PoS), digital signage and physical security technologies.

### Wireless access

IP VPN Value HSPA and Enhanced HSPA options offer IP Sec encrypted primary and backup service to our IP VPN/MPLS network.

These cost-effective, high-bandwidth options combine the strength, reliability and reach of our MPLS network with our HSPA 3G wireless network. Our wireless options extend the reach of our IP VPN network from coast-to-coast in Canada, ensuring maximum service availability to businesses with branch offices in remote areas.

HSPA-based wireless access options also provide a diversity option on a completely separate access infrastructure to ensure enhanced protection for mission critical data. They offer a choice of fully integrated HSPA primary wireless and backup accesses.

### Benefits

**Data confidentiality:** Improved security with the latest IP Sec encryption technologies

**Extended coverage:** Connectivity in remote locations in Canada with over 93% national coverage

**Reliable:** Network reliability and up-time with multiple gateways and paths between customer sites and MPLS network

**Cost-effective:** No construction or backhaul charges

**Faster provisioning:** Supports temporary event connectivity, accelerates setup and time to market

**Fully integrated support:** End-to-end network management and monitoring

### About Bell Wholesale
